2014	Folberth	Christian	<p>In this workshop, we hope to develop a set of experimental designs to systematically and holistically explore the costs and benefits of delivering bundled anticipatory interventions through time in selected sites. These interventions could be applied at very small scales in locations where we both can, and cannot, extend the interventions. We would like to explore the use of existing typologies at tractable scales that are small enough to be feasible and large enough to sample landscapes. We will also track the best quality monsoon forecasts and estimates of uncertainty delivered to identified decision makers (e.g., farmers) in modern learning systems. We hope to sample interventions drawn from various research communities that include social innovations, agriculture, conservation, water, financial and other communities.</p> <p>We aim to exit this 1.5 - day workshop with a menu of project design components that will systematically sample:</p> <p>a) selected classes of anticipatory interventions and explorations as to how they could be delivered;</p> <p>b) technical approaches to generate monitoring data streams in human and environmental dimensions to track the application of these interventions. This will allow us to test the use of sets of a small number of indicators for their value to monitoring at appropriate sampling densities</p> <p>c) specific sites in the region that are selected by this group where we can leverage existing projects, existing data streams, existing farmer networks and other relevant assets.</p>	Institute of Global Environment and Society	Jagdish Shukla	Fairfax, Virginia

(Attendance is by invitation only.)</p> <p>International policies and initiatives for climate and energy are faltering. Continuing increases globally in greenhouse gas emissions mean that the climate is unlikely to stabilize even after an increase of 2°C. Meanwhile major shifts are underway in energy supply. This conference will focus on national and sub-national approaches to reduce oil use and greenhouse gas emissions associated with transportation. What are the opportunities and what are the limitations? What new international and public-private partnerships might be pursued?</p>	Asilomar Conference Grounds	Organized under the auspices of the Energy and Alternative Fuels Committees of the U.S. Transportation Research Board and Hosted by Institute of Transportation Studies (ITS), University of California, Davis	Pacific Grove, California
